

## INTERNET PROTECT

### What is the Service?

- > Security notification service via email/paging on critical alerts/advisories
- > Security Information via AT&T BusinessDirect Portal
- > Real-time data on potential intrusions and attacks
- > Mitigation recommendations
- > AT&T Internet Protect - DDoS Defense:
  - Customer specific event detection and mitigation

### How does it address your needs?

- > Early warning of possible hacker attacks
- > Adds additional layer of defense
- > Immediate Confirmation and Internal Analysis – including security intelligence from other resources
- > No additional equipment to install at your locations
- > Expert Input and Advice – on what to do, and how to do it, quickly

### AT&T Internet Protect

- > Analyzes complete network flow of data
- > Correlates data in real time
- > Examines all Internet ports and protocols for anomalies
- > Provides device specific critical alerts
- > Provides a holistic network view of information

### Other services may only provide the following...

- > Data samples gathered from trusted and untrusted sources
- > Data analysis is not real time
- > Data sample from limited number of inputs
- > Work off of FW/IDS logs; limited subset of available information
